Project #152: Earthworms

- What you are going to Teach: Different environments for living.
- Materials Needed for Teaching: Large (six liter) glass jar with a large mouth, soil, earthworms, gravel, food for worms (lettuce, cornmeal, cereals)
- What You Do: Mix a small amount of gravel in good rich soil. Put earthworms into the Jar (look on a rainy day and you may find them in the grass or on the cement sidewalk).
- Add Food on top of the soil and keep the soil moist.
- Observe the earthworms in an environment much like the one in which they live!
- What to Talk About: They way the worms burrow and live underground. How they adapt to their new environment.

Activity: Go for a walk in a rainy day to collect your worms. Please be sure to put them into the soil right away!

Create a wiggly worm song. Make up some words and tune and wiggle on the ground.
