(Project by Renee!)

Project #285: QTip Flower Creations!

- Place some liquid paint of various colours into some small trays or containers.
- Have a sample of a small flower with some greenery with it available to view.
- Dab your QTips into the paint gently.
- Create the stem of the flower with wispy strokes onto some construction paper.
- The flower part could be done by dabbing the colours onto your paper.
- The Flower may look like the sample flower or be something different. Let the children decide what their own personal flower will look like.
- Another idea would be to get some natural seed from nature such as the dandelion seeds that blow in the air. When you find a dandelion or other flower that has gone to seed, try to collect the seeds.
- The tiny seeds can be dropped onto your flower on the paper to give the flower more texture.

Activity:

Walk first to find some flower petals and seeds for your creations!
