Project #485: Ice and Colours!

- Bring out the ice and let's play!
- Start with a bowl of ice cubes.
- Add some salt and see what happens!
- Add some food colouring next!
- Add another colour of the food colouring.
- See how the colours change
- After it melts, try taking an eye dropper or some kind of squeezing tube and squeeze your coloured water onto some white paper.
- Try other colours of paper (construction paper is good for absorbing the colours).
- Name the colours!
- Count the colours!

Activity: Go outdoors and see if you can find ice.... Maybe there is a frozen puddle. Place a container of water outdoors on a freezing evening and take a look in the morning!
