Ann's Creative Corner
Project #854: Gadget Printing and Cooking!

- Gather some home kitchen utensils such as non-sharp plastic spoons, rolling pins, metal sifters, plastic frying utensils etc.
- Place some paint of various colours into some small recycle dishes. This works well with a paper towel under the paint.
- Children may press the utensil onto the paint in the dish.
- They then can use these various utensil shapes onto a piece of paper or as a group project, this can be done on a poster board together as Family and friends.
- If you would like to add some details, you may like to add sprinkles of texture such as powder, sparkles confetti ect.
- Please provide some spices in jars for the children to "Smell" It is best not to use these for art as it is food waste if used for art.
- Try using the utensils in your playdough activities.
- Name the Shapes of the utensils.

Activity: Cooking and Baking!

Try baking and using utensils to mix and trim the baked goods.
Use the utensils to make playdough!
1 cup Salt, 2 cups flour, 2 tablespoons cream of tartar, 2 tablespoons oil and 2 cups water. Add food colouring if you like. Avoid food spices and flavourful smells as this is a choking hazard for toddlers and young children that may try to eat it! Children may help mix this. Then you may put it in a non-stick pot and slowly warm it on the stove at medium heat until it creates a ball. When cool enough, children and adults may knead the playdough to mix it thoroughly.
